

We make art of security

Celotron Home Guard is GSM- based, multi-function household control, surveillance and alarm system.

celotron

"Reliability and the fact that the system is Finnish, are the reasons why my home is secured by Celotron House Guard."

Kiira Korpi
Finnish figure skating champion

Home Guard

(Worlds easiest, "press button" programming!)

Wireless basic set (KVE-010) includes:

- White, stylish central unit made of non burning plastic
- Built in high quality 900/1800MHz Cinterion GSM modem
- 4 Different electric appliance controlling features (*)
- Sms adjustable timer function for all relays (outputs) (*)
- Thermostat function for house heating (*)
- GSMGate free of charge phone call function (*)
- 4 Analog inputs for different wired detectors / sensors
- 40 Wireless channels for different wireless detectors
- White siren with red strobe light (for indoor use)
- Temperature sensor for heating control and supervision
- Wireless smoke detector (EN54 and EN14604 approved)
- Wireless movement detector (pet type)
- Wireless magnetic sensor (incl. panic button)
- Wireless remote controller (incl. on/off & panic button)
- Power failure backup battery 1,3 Ah
- Power supply (lead acid battery charger) 1,2A / 14V
- Warning stickers (4 pcs.)
- Attachment screws and other small parts

(* Separately sold DIN-rail mount, relay card: RU04 is required.)

System will alarm you about burglars and other problems. Most importantly, it will give you peace of mind

All alarms from this system can be directed to surveillance company's. (Where SMS service is available.)

With the free of charge phone call gate opener function, you can easily open garage door or light up the yard when coming home at night.

System controls your heating when you are away. This way you will save lot of money and nature. All messages can be re-named by yourself.

Home Guard can connect to 40 pcs. of wireless sensors, detectors and different remote controllers. The system can also be equipped with wireless keypads for 5 doors.

All 4 analog inputs are build to accept all possible sensors that are currently manufactured and used in home automation or eaven in industrial use. Measurement type can be freely chosen for all inputs from: Voltage 0-20Vdc, current 0-20mA (requires additional resistor), temperature (alarm can be set to happen from over crossing or falling below type), resistance, opening top, closing top, and resistance loop (surveillance for wire cut & short circuit).

Home Guard system is delivered to you fully programmed. Home Guard only needs a simple press of a button and a simultaneous free of charge phone call to the system from you, to activate it. You can then easily add more users by simple sms message. System is then fully operational ! The detectors do not require any programming or hassle, you simply insert the equipped lithium battery's to them and you are all set.

We assure you, the programming is the easiest in the whole world and everybody can do it !

Home Guard is excellent choice for elder people, families with kids and DIY men. For example the home/away state of heating system, is now cheap and easy to build.
